NATIONAL UNIVERSITY OF SINGAPORE

SCHOOL OF COMPUTING

MID-TERM TEST
AY2018/19 Semester 2

CS2100 — COMPUTER ORGANISATION

13 March 2019   Time Allowed: **1 hour 45 minutes**

INSTRUCTIONS

1. This question paper contains **THIRTEEN (13)** questions and comprises **EIGHT (8)** printed pages.

2. Page 7 contains the **MIPS Reference Data** sheet.

3. Page 8 contains reference tables for **ASCII** and **Powers of Two**.

4. An **Answer Sheet**, comprising **TWO (2)** printed pages, is provided for you.

5. Write your **Student Number** and **Tutorial Group Number** on the Answer Sheet with a **PEN**.

6. Answer **ALL** questions within the space provided on the Answer Sheet.

7. You may write your answers in pencil (at least 2B).

8. You must write legibly or marks may be deducted.

9. Submit only the Answer Sheet at the end of the test. You may keep the question paper.

10. This is a **CLOSED BOOK** test. However, an A4 single-sheet double-sided reference sheet is allowed.

11. Maximum score of this test is **40 marks**.

12. Calculators and computing devices such as laptops and PDAs are not allowed.

——— **END OF INSTRUCTIONS** ———

Questions 1 – 6: Each multiple-choice-question has only <u>one</u> correct answer. Write your answers in the boxes on the **Answer Sheet**. Two (2) marks are awarded for each correct answer and no penalty for wrong answer. **[Total: 12 marks]**

1. You are told that $(\textbf{32})_b$ is a product of two prime numbers (*i.e.,* $(32)_b = P_1 \times P_2$ *where* P_1 *and* P_2 *are primes*). What is/are the value of base $\textbf{b}$?

   (i) 8　　　(ii) 9　　　(iii) 11

   A. (i) only
   B. (i) and (ii) only
   C. (i) and (iii) only
   D. (i), (ii), and (iii)
   E. None of the above

2. What is the content of **$t2** after executing the following MIPS code?

   ```
   lui   $t0,   0xAAAA
   srl   $t0,   $t0  ,  16
   lui   $t0,   0xA0A0
   ori   $t1,   $zero, 0x5555
   and   $t2,   $t1  ,  $t0
   ```

   A. 0x00000000
   B. 0x0000FFFF
   C. 0xA0A00000　　　　　　　　A
   D. 0xA0A05555
   E. None of the above.

For questions 3 – 4:　　　　3　　　　6
You are designing a machine with 6 registers and 64 addresses. You are in the process of creating two (2) classes of 16-bit instructions. The first is instruction class A that has 3 registers. The second is instruction class B that has 1 address and 2 registers. Both instructions exist and the encoding space is completely utilised.

7 3 3 3
4 3 3 6

3. What is the *maximum* total number of instructions?

   A. 119　　　1B + 15*8 A = 121
   B. 120
   C. 121
   D. 122
   E. None of the above.

4. What is the *minimum* total number of instructions?

   A. 22
   B. 21　　　8A + 15B = 23
   C. 20
   D. 19
   E. None of the above.

For questions 5 – 6:
Study the following C programs.

```c
#include <stdio.h>

typedef struct {
  int numer[1]; // numerator
  int *denom;   // denominator
} rational;

void multiply(rational, rational*);

int main(void) {
  int val1 = 2, val2 = 5;
  rational num1 = {{1}, &val1}, // 1/2
           num2 = {{2}, &val2}; // 2/5
  multiply(num1, &num2);
  printf("%d %d\n", num1.numer[0], *(num1.denom)); // Question 3
  printf("%d %d\n", num2.numer[0], *(num2.denom)); // Question 4
}

void multiply(rational x, rational *y) {
  int x_num = *(x.numer), y_num = *(y->numer),
      x_den = *(x.denom), y_den = *(y->denom);
  *(x.numer)  = x_num * y_num;
  *(x.denom)  = x_den * y_den;
  *(y->numer) = x_num * y_num;
  *(y->denom) = x_den * y_den;
}
```

5. What is the output of the **first** print?

    A. 1 5
    B. 1 10
    C. 2 5
    D. 2 10
    E. None of the above

6. What is the output of the **second** print?

    A. 1 5
    B. 1 10
    C. 2 5
    D. 2 10
    E. None of the above

Questions 7 – 10: **C & MIPS (Tracing, Compiling, Encoding)** **[Total: 14 marks]**

For the next *four* (4) questions, refer to the code below. The code has been partially filled in for you. One of the blanks has been filled for you.

C Code	MIPS Code

`int main(void) {`
`  i = 0;`
`  A = 'A';`
`  a = 'a';`
`  Z = 'Z';`
	`[ addi $s1 $0 0          ]`
	`[ addi $s3, $zero, 65     ]`
	`[                        ]`
	`[                        ]`

`  do {`	`loop:`

`    if( str[i] >= 'A'`
 	
`        && str[i] <= 'Z' ) {`
	`    add  $s7, $s0  , $s1`
	`    lb   $t2, 0($s7)`
	`    slt  $t1, $t2  , $s3`
	`    bne  $t1, $zero, else`
	`[ slt $t1, $s5, $t2       ]`
	`[ beq                     ]`

`      func(str + i);`	`    j    func`
	`ret:`
`    }`	`else:`
`[   i++                  ];`	`    addi $s1, $s1, 1`
`  } while(str[i-1] != 0);`	`[ beq                     ]`
`  return 0;` `}`	`quit: j   exit`
// Code omitted	*# Code omitted*

`void func(char* str) {`
 	
`[   *str = *str + 97 -65;  ];`
 	
`  return;`
`}`
	`func:`
	`    lb   $t8, 0($s7)`
	`    addi $t8, $t8,  97`
	`    addi $t8, $t8, -65`
	`    sb   $t8, 0($s7)`
	`    j    ret`

// Code omitted	*# Code omitted*
// End of Program	*exit:*

We will also use the following variable-to-register mapping within the ***main*** function and not the ***func*** function.

base addr of **str**	**$s0**	A	**$s3**
i	**$s1**	a	**$s4**
len	**$s2**	Z	**$s5**

Note that in the section marked with "**Code omitted**", there can be *any number* of instructions. The ASCII table, if required, is available at the end of the question paper.

7. Fill in the blanks with appropriate C code and MIPS code. Note that you must fill in *exactly* the given number of instructions. You CANNOT use *pseudo-instructions* for the MIPS instructions. [8 marks]

8. Consider running the program with the initial value of **str** as **"CS2100 is Easy!"**. What will be the final value of **str**? [2 marks]

9. What is the encoding in *hexadecimal* for the 7th MIPS instruction "**bne $t1, $zero, else**"? [2 marks]

10. **[CHALLENGING]** What is the *maximum* possible number of MIPS instructions that can be inserted into the regions marked with "**Code omitted**"? Note that the code can be inserted into any one of the two regions. We are only interested in the total. For simplicity, write your answer in terms of $2^x \pm y$ [2 marks]

***Question 11:* Number Systems** **[Total: 6 marks]**

For the next question, recall the IEEE 754 single-precision floating-point number representation.

11. Given the following hexadecimal value in the IEEE 754 single-precision floating-point number representation:

$$\text{0x C 0 B B 0 0 0 0}$$

What decimal value does it represent? [6 marks]

***Questions 12 – 13:* Datapath & Control** **[Total: 8 marks]**

For the next *two* (2) questions, refer to the diagram of the Datapath and Control below.

However, let us consider a _different_ **Control** unit from the one we have in the lecture notes. Assume that our modified control unit produces the following control signals:

Instr. Type	RegDst	ALUsrc	MemToReg	RegWrite	MemRead	MemWrite	Branch
R-type	1	0	0	1	0	0	0
lw	0	1	1	1	1	0	0
sw	1	1	1	0	0	1	1 (wrong)
beq	1	0	1	0	1	0	1

However, **ALUop** is still the same as before. We will also be using the following notation:
- The value of constants will be given as constants (e.g., **-5**)
- The value of the register number 8 will be represented as **$8**
- The value stored in the register number 8 will be represented as **R[$8]**
- The value of arithmetic operation, such as addition, between two values A and B will be represented as **A + B**
- The value stored in the memory location L will be represented as **M[L]**

12. You are given an instruction below, fill in the table in the answer sheet. Assume that the label **L1** is converted to the immediate value **-2**.
    beq $8, $0, L1   [6 marks]

13. **[CHALLENGING]** The instruction **sw** should not produce the value 1 for Branch control signal (as highlighted above). Give one MIPS instruction using **sw** that is _guaranteed_ to cause the processor to perform a branch.   [2 marks]

MIPS Reference Data ①
